

## Steps to create an EC2 instance or Server on AWS

1. Create an AWS account and log in into AWS.
2. Choose EC2 service.
3. Click on Launch Instance.
4. Choose Instance count. (No of instances you want to create)
5. Choose instance name as webserver. You can provide any name.
6. Choose Amazon Machine Image (AMI) simply like your operating system. I will choose Ubuntu. Select specific version of AMI. I will select ubuntu Linux 20.
7. Choose instance type as T2 micro (it has one core CPU and 1GB RAM)
8. Choose Pem file. (It is just like password)
9. Choose Security Group as SSH and HTTP.
10. Choose Elastic Block Storage Volume 8 GB same as Hard Disk.
11. By clicking on the **Launch Instance** button, we can create a server in AWS.
